## SAN ANTONIO COLLEGE

### Ambriel Davis

Computer Information Systems

“We delight in the beauty of the butterfly, but rarely admit the changes it has gone through to achieve that beauty.”

-Maya Angelou

Ambriel can hardly believe where her journey has taken her. She was caught in a common trap of a busy work lifestyle just making ends meet. She thought college was not an option for someone like her. In addition to this, Ambriel had memories of being an unsuccessful student through primary and secondary education, making her apprehensive about how successful she would be in college.

Ambriel had a passion for computers since childhood. Her first computer was a Commodore 64/128. She has also recently found interest in inventions and scientific findings, inspired by a chemistry course.

While Ambriel's childhood had many pains and challenges, it was the driving force that led to her independence and self-determination. Things began to change at the age of 17 when she encountered God. She obtained her GED at 19. She later pursued a college education, which she completed with a 3.7 GPA.

Ambriel encourages others to think outside the box, believe in yourself, trust God, rebuke self-doubt, be unapologetically your own, and live your best life. Above all, she wishes that you prosper holistically.
